Economics: Some recent trends in microeconomics have focused on the behavior of individuals and firms, the role of money, and the causes of inflation. The "real" economy is one in which prices and wages adjust to changes in demand and supply, and the "nominal" economy is one in which real wages and real prices are fixed. The "real" economy is more flexible and responsive to changes in demand and supply than the "nominal" economy.

Economics: The real economy is the economy in which prices and wages adjust to changes in demand and supply, and the nominal economy is the economy in which real wages and real prices are fixed. The real economy is more flexible and responsive to changes in demand and supply than the nominal economy.
